

SIP Workforce & Skills Insights

Supporting member companies to gain insight and understanding of skills priorities for industry at a company, regional and national level.

- Benchmarking: comparing your company approaches to talent development with the wider sector, including apprenticeship levy recovery
- Ability to see how your organisation compares against national sector-based workforce characteristics (for example gender, age profile, qualification level)
- Gain a better understand of skills gaps, shortages and related policies across the sector
- Support with the development of evidenced-based presentations to make your internal business case for skills or apprenticeships
- Production of case studies to showcase your training and or apprenticeship programmes

About the Service

SIP Workforce & Skills Insights is a service which provides member companies with the evidence they need to support their skills and people development ambition.

We can explore your requirements through a discussion with you and supplement this with secondary data sources from government, local authorities, key skills stakeholders, trade associations and other partner organisations.

We gather data from a range of sources, and use our in-house data tools to provide insights into areas such as key industry occupations, apprenticeships, jobs and emerging skills.

The Output

We will produce either a report or a summary presentation on the insights needed to support you in developing strategy, making an internal business case or developing key internal messages to promote your approach.

We use visuals and infographics, presentations and easily digestible content.

Benefits

- Insights into national workforce information across your sector, including skills gaps and shortages
- Comparison of your company's approach to talent development with that of others in your sector
- A summary publication and/or infographics that provide you with the evidence you need to take action
- Provision of SIP data to support People Strategy development and action planning

“On behalf of its members, the Science Industry Partnership conducts major research into the skills required for our sector. In light of the global operating environment in which we now operate, this evidence-base has never been more important and our current Life Sciences Skills Strategy will underpin the skills needs of the industry through to 2030, building a clear and robust evidence base of the current workforce to provide a forward-looking strategy.

“Our members require such evidence in order to develop a robust skills pipeline and to support decisions around investment in training and apprenticeships at every level, and our education providers partners require such evidence to plan and build capacity and capability where it is needed.”

Chair, SIP Futures Group

SIP Research Capability

The SIP research team have access to UK’s leading skills and employment datasets and reports. This, combined with our skills policy expertise means we can provide both workforce data and information on the skills landscape.

On behalf of the SIP, we also undertake surveys, consultations and interviews to gather qualitative inputs and a deeper understanding of the issues the sector is facing.

Membership Days Used

This intervention is based on the project scope, and is typically a minimum of 1 membership day.
